

Baby Veronica

Veronica was born a F.A.S.(Fetal Alcohol Syndrome) baby. At three months her little body still jerked and shook all the time. Her eyes were dull and her feet very sensitive.

We started with baby massage for the first two days, then added babygym. After one week Veronica had undergone a complete change. Two weeks later all jerking had stopped, her eyes were bright and she was a happy little girl, enjoying every minute of the massage and babygym.

At the age of three months and three weeks she started holding her own bottle.

At seven months and two weeks Veronica tried to crawl but experienced problems. Fortunately babygym came to the rescue and within a few days she was crawling all over, loving her independence
